Sentry Isis Access Control System

SB Electronic Systems has become the leading supplier of access control systems to academic establishments and has, in conjunction with their users, developed the Sentry system. Sentry is currently used in over 150 academic libraries and resource centres in the UK and Ireland, providing added security and invaluable management information.

Sentry Isis is the latest evolution of this market leading system, now with full Windows Vista and XP compatibility.

Enhanced Security

Create a safer, secure environment for your users and your staff. Sentry has proven to dramatically reduce the instances of theft:

“The main library at Oxford Brookes University had become a target for local thieves. 165 thefts of personal property occurred between 1999 and 2001. Since going live with Sentry in September 2001, we have recorded only 21 incidents.”

Frances Hall—Oxford Brookes University Library January 2003

Intelligent Reporting

Providing occupancy, activity and comparative reports will provide useful information about usage and trends.

Interactive Link to Host Library System

Allowing for the transfer of member details from the Host Library System and provides an on-line enquiry function.

Link to Host Library Systems:

- Innopac
- Talis
- Unicorn
- Horizon
- Aleph
- Galaxy
- Voyager
- Olib
- Quercus+

Restricted Area Control

Allows the system administrator to set access rights dependant on defined fields such as department or course.

Multi-Institutional

A single Sentry database can be used to control several sites making it easier to create local or global traps, bans and visitor registrations.
